About me

I grew up in Newfoundland, enjoying outdoor activities, and have always wanted it to be my permanent home. After graduating from Memorial University with a degree in Visual Arts, I traveled to Western Canada where I worked for a few years. In 2019 I made the move back to Newfoundland to pursue a post diploma in Geographic Information Systems (GIS). It tied together my visual arts skills with my love for the outdoors. In my GIS diploma we did some sections in HTML and CSS and SQL which I really enjoyed.. When I heard about Get Coding I thought it sounded like an amazing opportunity and tied in nicely with my skills. I am loving learning from professionals in the tech world and am excited about what my future holds!

Experience

January 2022 - Current

Web Designer and Social media coordinator

Philip McIlroy Furniture Maker & Designer - Freelance

I designed and am maintaining a website and social media accounts for my husbands growing furniture making business. This is a great experience for me, as it allowed me to use my skills learnt in the Get Coding program. It will also allow his business to have a impactful online presence and attract more business.

May 2021 - December 2021

Administrative Support Specialist

Shorefast - Contract Full-time

My duties varied day to day depending on what was needed, from updating employee information in QuickBooks to designing posters for events. I particularly enjoyed working with the scholarship committee, which raised money for the local students to attend post secondary education.

Education

January 2022 - Current

Full-Stack Software Development

Get Coding

I decided to join Get Coding after being inspired by courses in HTML and CSS I took while completing my GIS diploma. Through the Get Coding program I have now completed projects using JavaScript and React to further build my skill portfolio. I continue to be excited to expand my knowledge in coding.

2019 - 2020

Post Diploma in GIS

College of the North Atlantic

After moving back to Newfoundland I enrolled in the Geographic Information Systems program. I was inspired to do this program as it combined my artistic side with my love of the outdoors. I was able to learn many new skills in this program including Python, sql, HTML and CSS. During this program I designed a visual mock-up for a 3-D trail map for a trail in Gros-Morne National Park.

2012 - 2016

Bachelor of Visual Arts - BFA

Memorial University of Newfoundland

Pursuing a visual arts degree allowed me to learn many art forms and explore my creative side. I particularly enjoyed learning the various printmaking and sculptural techniques. For my final project I combined these two mediums to create a sculptural house that explored the ideas of reality.
